

## Problem

### Concept

- Provide easy way to embed data in widget form into a website
- Widgets provide at-a-glance information from FindTheBest's databases

### Challenges

Purely client-side code (javascript, css & html)

### Who cares

Bloggers and Website Publishers

### Why they care

- Visualizations
- Easy to configure

## Solution

Create a widget builder that allows the user create a widget with FindTheBest data.

Provide an intuitive interface that helps the user to create a widget of any specific items.

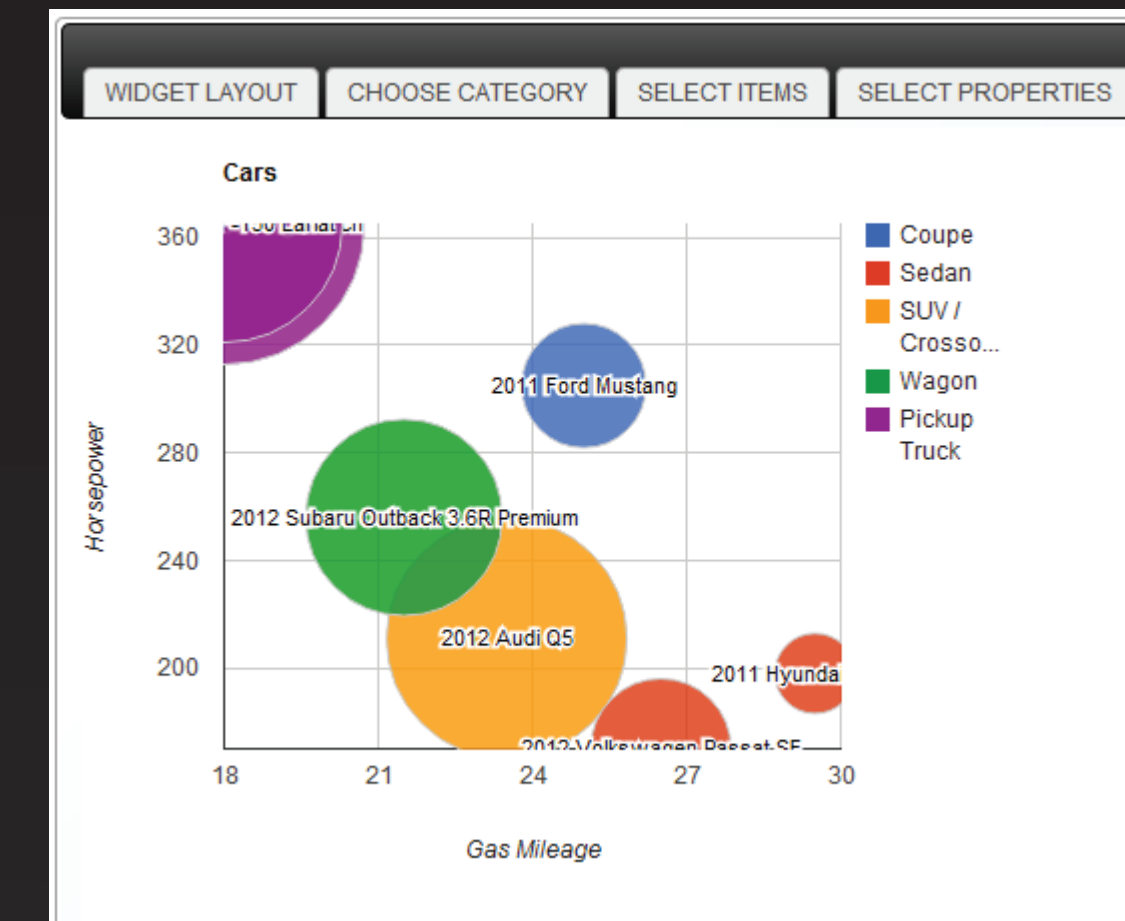

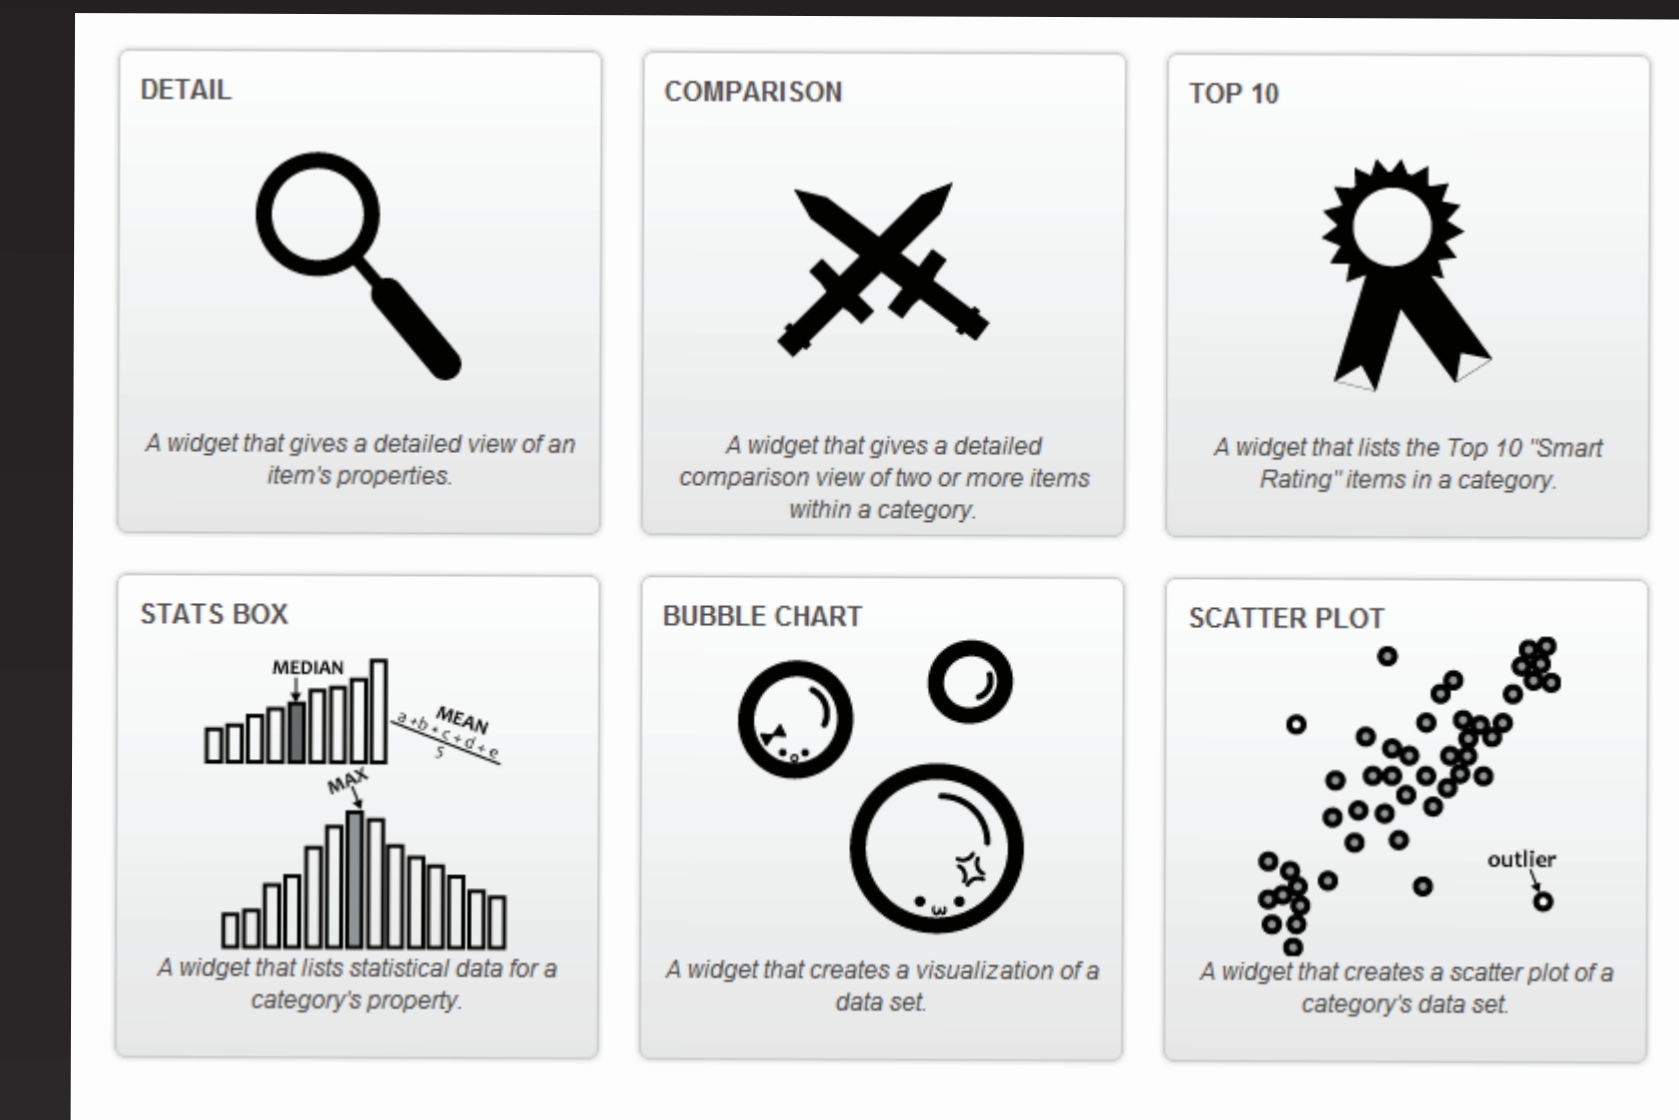

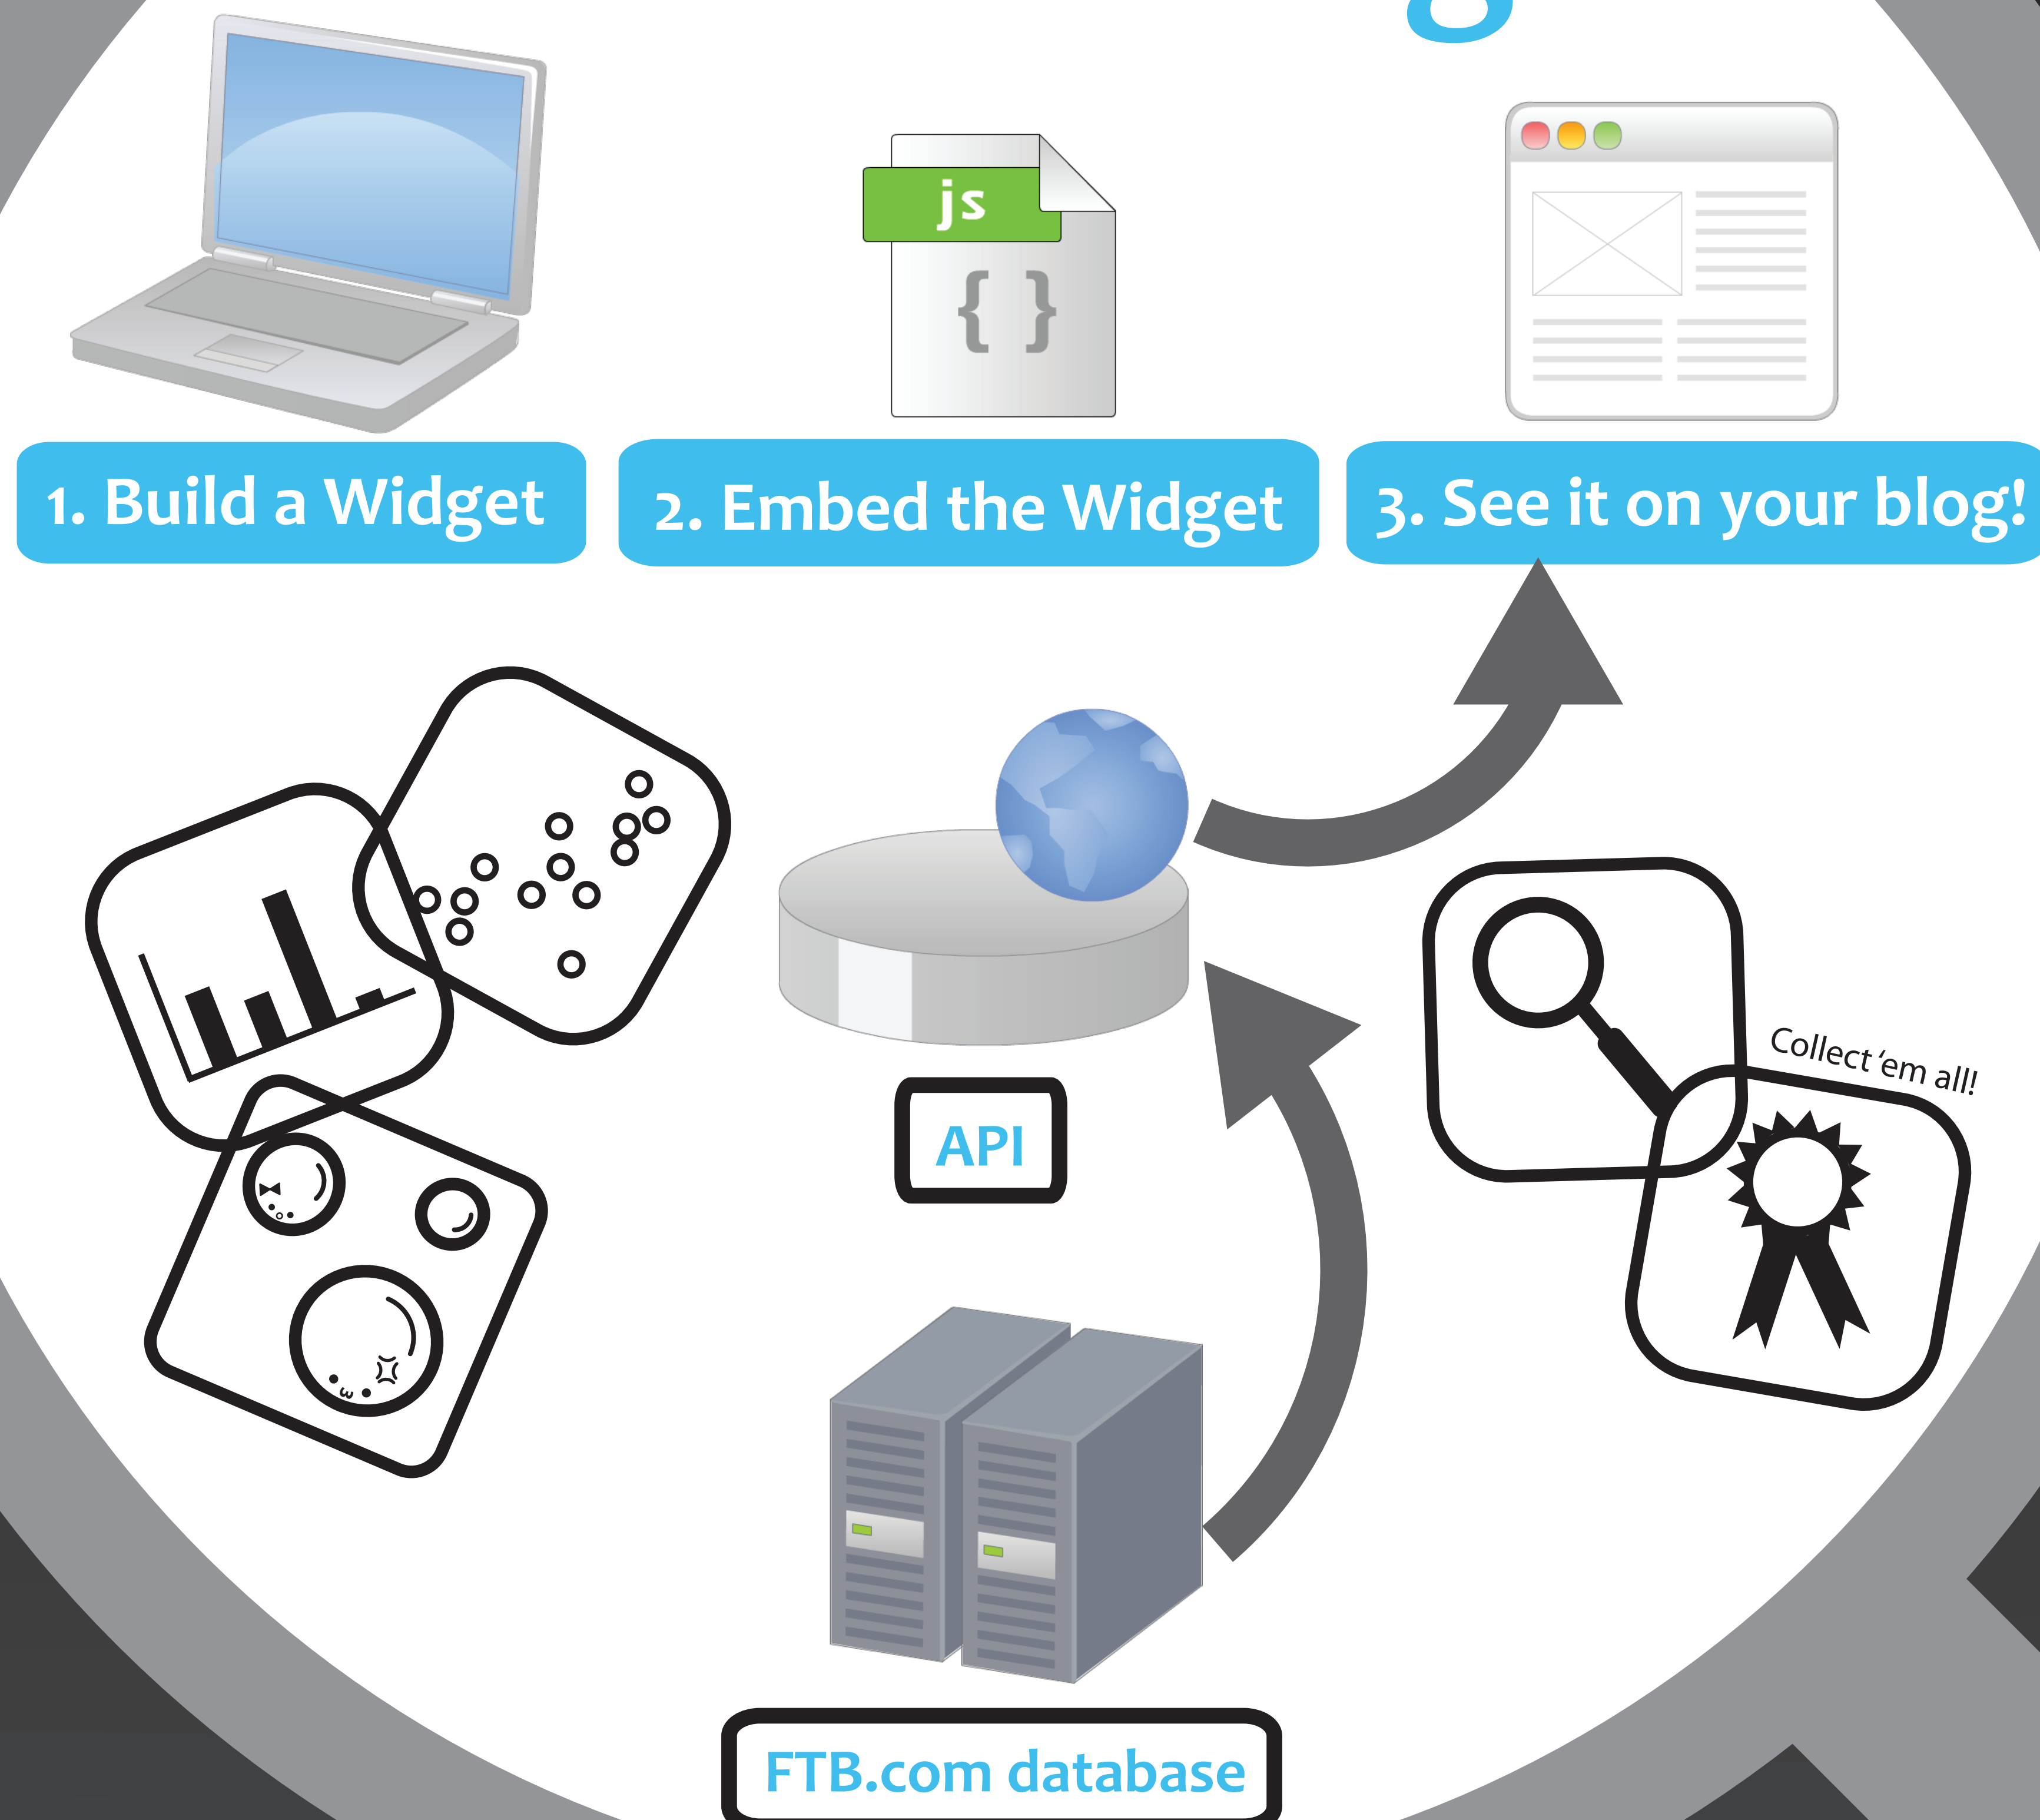

## What We Learned:

- Agile/ SCRUM
- Test-driven development
- MVC Framework
- Teamwork
- Importance of Usability Testing

# FindTheBest Widget Builder

CAPSTONE 2012

## Create a Widget

| WIDGET LAYOUT    | CHOOSE CATEGORY  | SELECT ITEMS | SELECT PROPERTIES |
|------------------|------------------|--------------|-------------------|
| FLORIST          | FromTadflowers   | 125K users   | Yes               |
| Kal Bloom        | Kal Bloom        | users        | Yes               |
| Proflowers       | Proflowers       | 588K users   | Yes               |
| Roses Nationwide | Roses Nationwide | users        | Yes               |
