

The Problem

Diagnosis procedures, home inspection, etc. are processes that can be invasive, time consuming, and costly but are necessary.

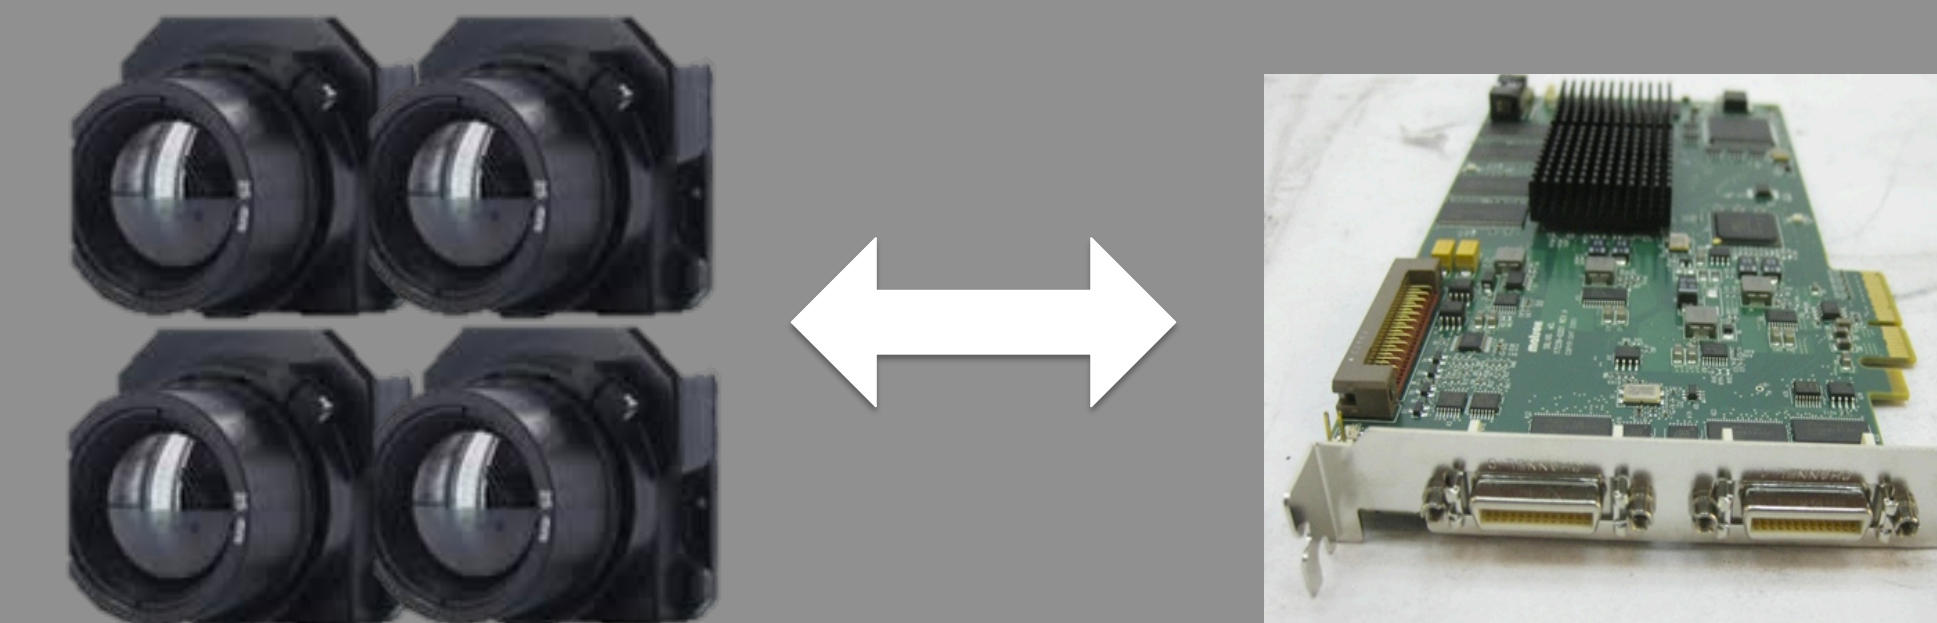

The Solution

The Sixth Sensor can discover hidden anomalies in a non-invasive way, by using infrared technology with a single click.

The Process

1. Image Capture

Single click triggers synchronize four-image capture

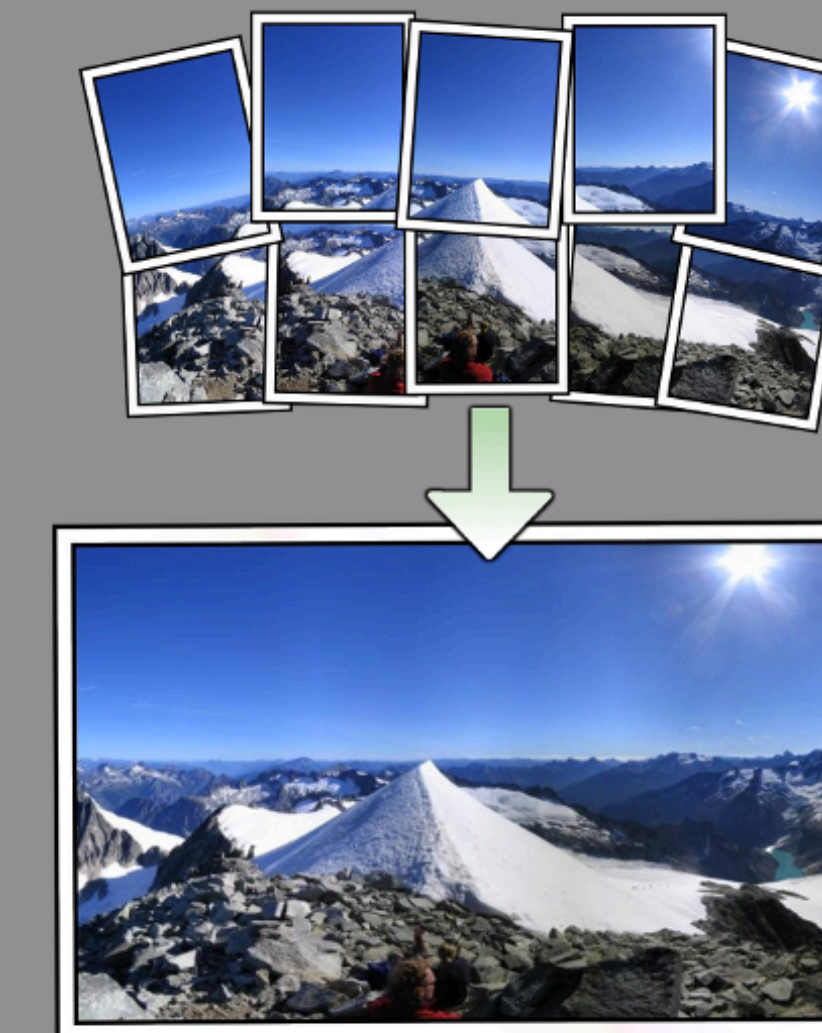

2. Database

Store and retrieve user account information, images, and notes

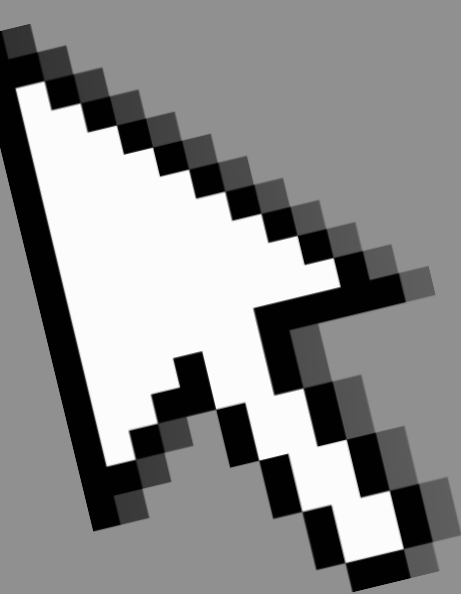

3a. Image Stitching

Align images taken at different angles

3b. GUI

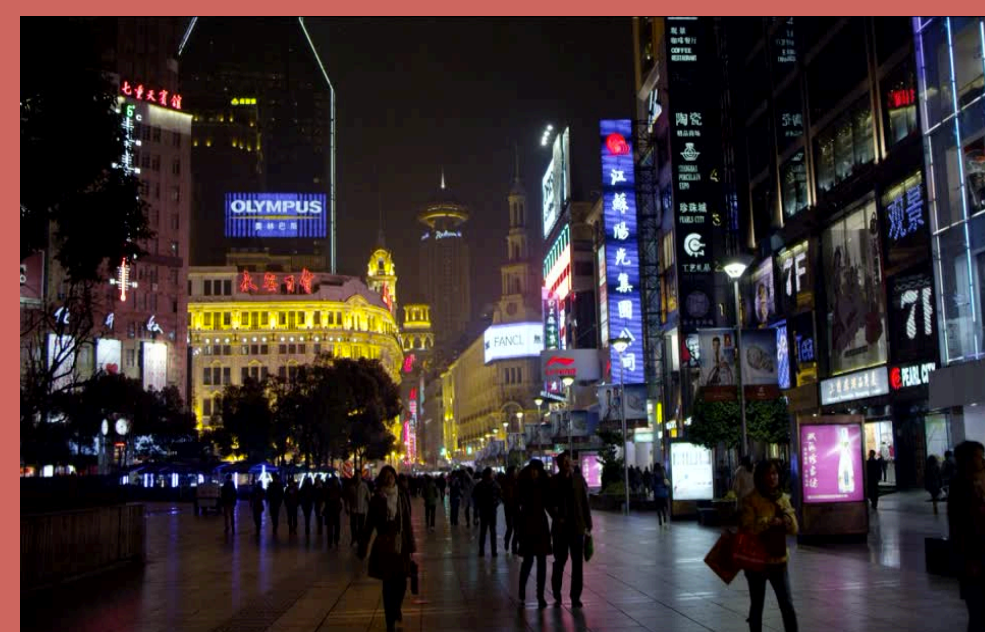

Easy interface with the camera system and database

Light Spectrums

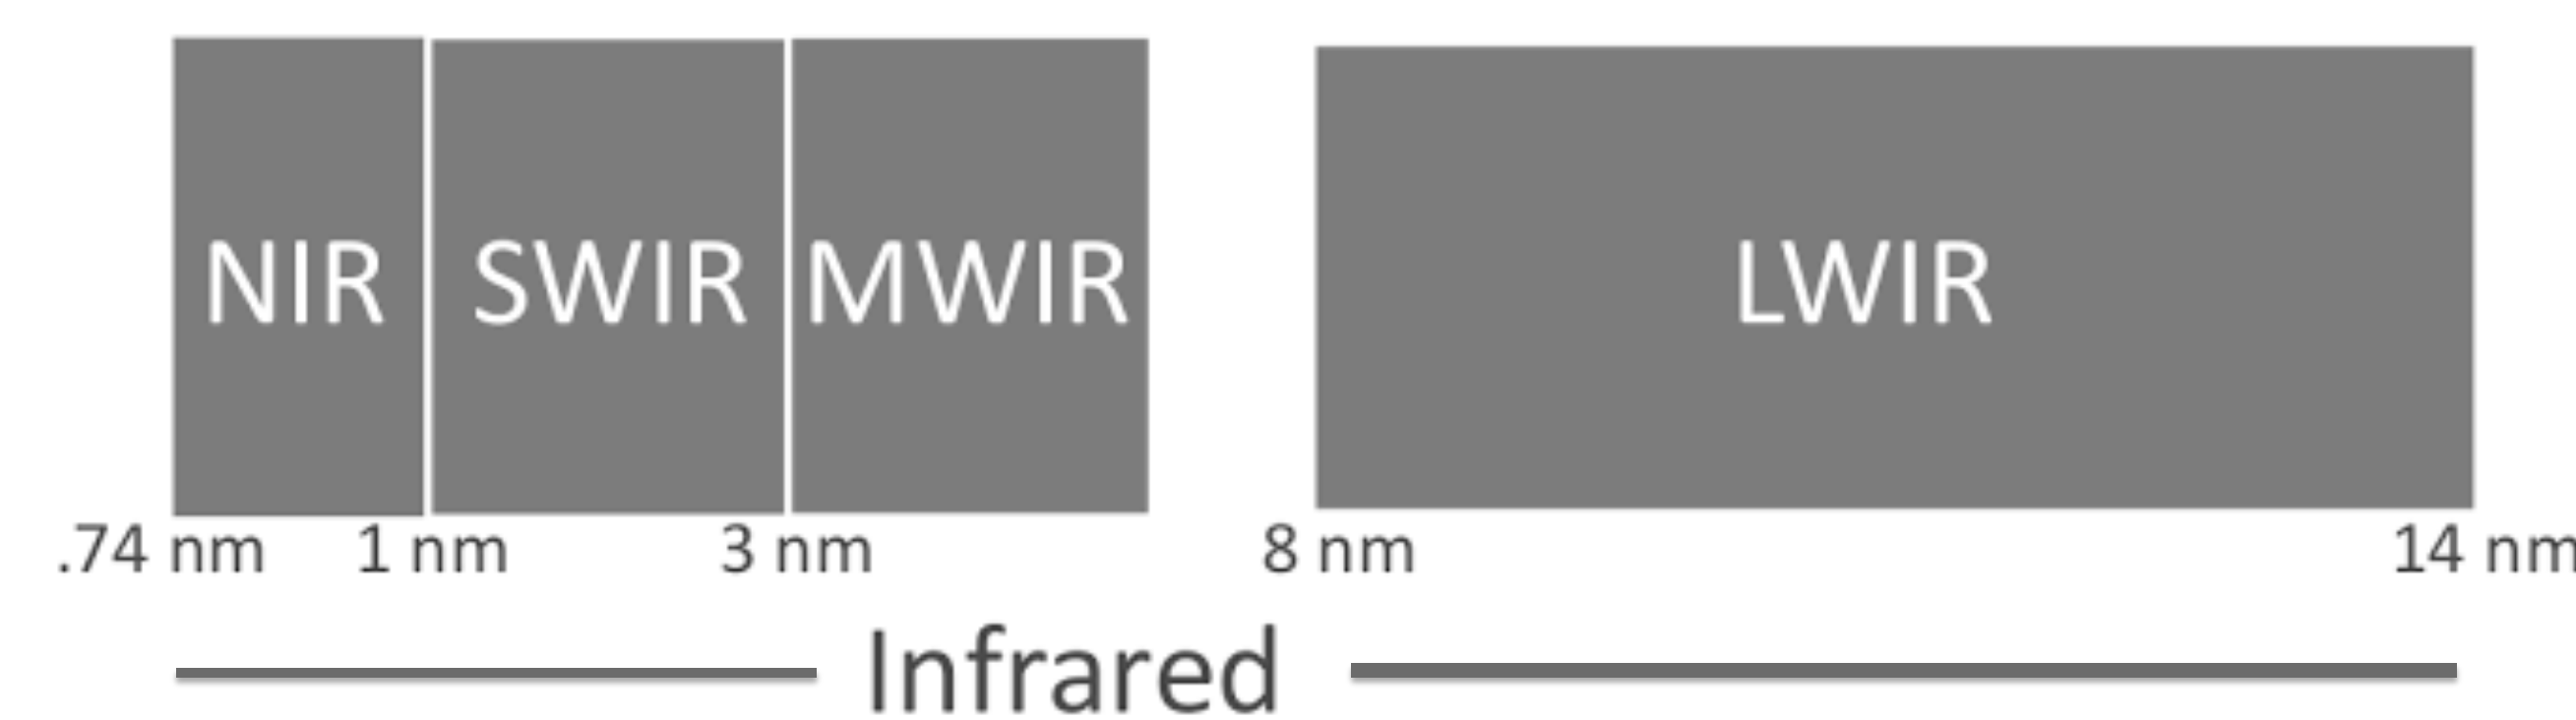

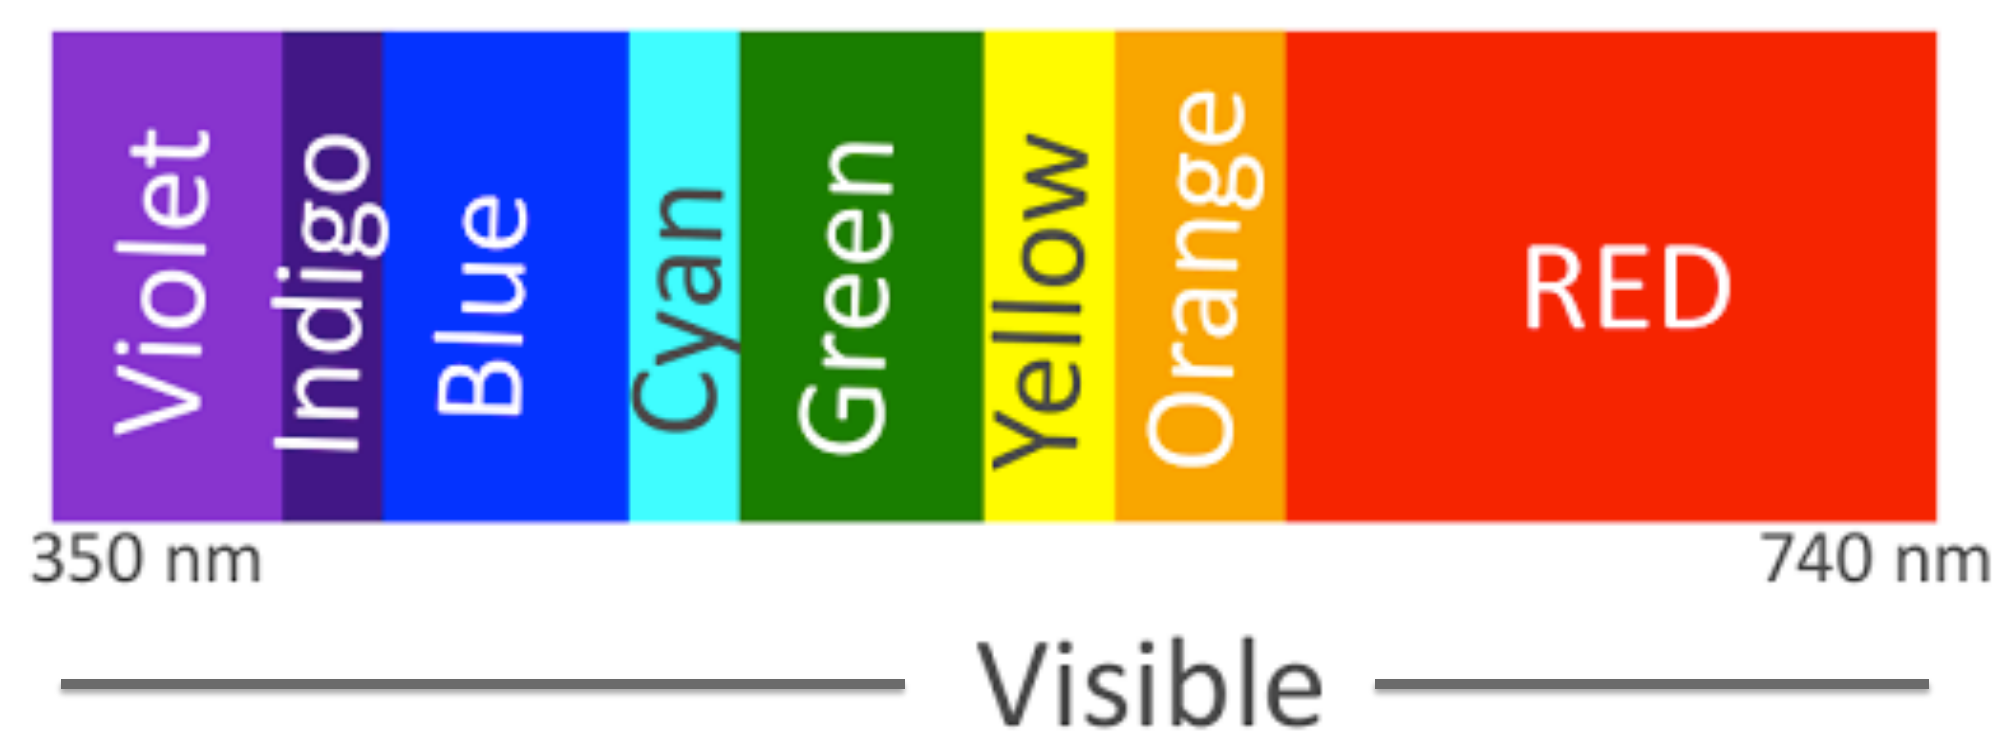

Visible

- Naked eye
- Reference spectrum

NIR

- Check food quality
- Medical screening

SWIR

- Hidden moisture
- Counterfeiting

LWIR

- Surveillance
- Body Imaging
